CHECKLIST FOR INITIAL SITE INSPECTION

Initial Site Inspection Checklist:

a) Identify key features/risks that may expose the construction site to specific hazards including topography, soil conditions, proximity to water bodies/fault lines, vegetation.
b) Assist in preparation of project documents that have adequate mitigation measures against hazards.

No	Site Condition	Hazard		Decision
	Proximity to water body (less than 50m from river, stream or dry riverbed)	Flooding	N	
			Y	
	Cracked soils	Cracking of building	N	
			Y	Seek for further soil investigation
	Presence of excessively green vegetative cover (grass or shrubs) during dry season.	Water logging which could lead to	N	
			Y	Conduct further soil investigation.
	Presence of rock outcrop	Rock on the foundation	N	
			Y	Conduct further soil investigation
	Sandy soils especially in lakeshore areas.	Unstable soils at foundation level	N	
			Y	Conduct further soil investigation
	Presence of cracks on existing structures on/ around/ near the site.	Cracking of building	N	
			Y	Conduct further soil investigation

Recommended Plan of Action

1. Obtain local knowledge from inhabitants of the area to check weather patterns such as:
    a. Wind directions, strength and directions; this helps with roof designs.
    b. Rainfall patterns – to determine levels of water run-off, drainage; this helps with floor slab height off the ground.
2. Dig trial pits of about 1.0 to 1.5m deep around the site. This will assist in determining the formation of the soil.

ENVIRONMENTAL AND SOCIAL SCREENING FORM FOR SCREENING OF POTENTIAL ENVIRONMENTAL AND SOCIAL IMPACTS INFRASTRUCTURE PROJECT

Government of Republic of Malawi

Environmental & Social Screening Form

(Guidelines: Site inspection of project site. The evaluation results to be a consensus of at least two officials)

	Impact	**Appraisal**		**Significance**			***Proposed Mitigation Measures***
		Yes	**No**	**Low**	**Medium**	**high**	
1.0	**Environmental Screening**						
	Will the project generate the following negative impacts						
1.1	Loss of trees/vegetation	x		x			
1.2	Soil erosion						
1.3	Siltation of water courses						
1.4	Loss of habitat to wildlife						
1.5	Dust emissions						
1.6	Generation of solid wastes						
1.7	Increased incidences of open defecation						
1.8	Borrow pits and pools of stagnant water						
1.9	Rubble/heaps of excavated soils						
1.10	Introduction of Alien / Invasive plants and animal species						
1.11	Destabilisation of river banks and or drainage system due to sand mining						
1.12	Spread of water related diseases e.g. Diarrhoea						
1.13	Loss of soil fertility						
1.14	Contamination from agrochemicals and pesticides						
1.14	Salinisation or alkalisation of soils						
1.15	Reduced water quality and quantity						
1.16	Incidence of flooding						
1.17	Removal of native tree species						

Overall evaluation of Environmental and Socioeconomic Screening Exercises.

The results of the screening process would be either the proposed sub - projects would be exempted or subjected to further environmental and resettlement assessment. The basis of these options is listed in the table below:

Review of Environmental Screening	**Tick**
1. The project is cleared. No serious impacts. *(When all scores are "No" in form)*	
2. There is need for further assessment. *(when some score is "Yes, High" in form)*	
3. Need to prepare ESMP
